Fractions and LCM: practice bank

Working in pairs

1. One of you is the **Explainer**, the other is the **Writer**. **Swap roles after every part (A, B, C…).**
2. The Explainer says the next step **out loud** ("first I find the LCM…"). The Writer writes it in the notebook.
3. Do not just give the answer: ask "why?" and "what do we do next?".
4. Both of you check the answer before moving on. Disagree? Redo the question together.

Practice bank write all your steps in your notebook

A **Find the LCM.** Show the prime factors.

1) 4 and 6 **2)** 6 and 9 **3)** 8 and 12

4) 10 and 15 **5)** 4, 6 and 9 **6)** 6, 10 and 15

B **Which case is it?** Write *same*, *multiple* or *neither*, then calculate. Simplify if you can.

1) $\frac{3}{8} + \frac{2}{8}$ **2)** $\frac{5}{6} + \frac{1}{3}$ **3)** $\frac{3}{4} + \frac{1}{6}$

4) $\frac{7}{10} - \frac{2}{5}$ **5)** $\frac{5}{9} + \frac{1}{6}$ **6)** $\frac{11}{12} - \frac{3}{8}$

C **Add or subtract.** Show the LCM and the conversion line. Simplify if you can.

1) $\frac{2}{3} + \frac{3}{10}$ **2)** $\frac{7}{8} - \frac{5}{12}$ **3)** $\frac{5}{6} - \frac{3}{10}$

4) $\frac{3}{4} + \frac{5}{6}$ **5)** $\frac{7}{15} + \frac{4}{9}$ **6)** $\frac{9}{10} - \frac{7}{15}$

7) $\frac{5}{12} + \frac{3}{8}$ **8)** $\frac{13}{15} - \frac{3}{10}$ **9)** $\frac{5}{6} + \frac{7}{15}$

Practice bank continued

D **Spot the mistake.** Explain what went wrong, then find the correct answer.

1) Ana writes: $\frac{3}{5} + \frac{2}{7} = \frac{5}{12}$.

2) Ben writes: $\frac{3}{4} - \frac{1}{6} = \frac{3}{12} - \frac{1}{12} = \frac{2}{12}$.

E **Three fractions.** Find the LCM of **all three** denominators first. Simplify if you can.

1) $\frac{2}{3} + \frac{1}{4} - \frac{1}{6}$

2) $\frac{7}{8} - \frac{1}{6} + \frac{1}{4}$

3) $\frac{3}{4} + \frac{2}{5} - \frac{1}{10}$

4) $\frac{5}{6} + \frac{3}{8} - \frac{2}{9}$

F **Problems.** Write the calculation, then the answer.

1) Sara uses $\frac{2}{5}$ of a ribbon for a card and $\frac{1}{3}$ of it for a bow. What fraction of the ribbon is used? What fraction is left?

2) In a class, $\frac{3}{8}$ of the students walk to school and $\frac{1}{6}$ come by bus. The rest come by car. What fraction come by car?

3) Tom reads $\frac{1}{4}$ of a book on Monday, $\frac{1}{3}$ on Tuesday and $\frac{1}{6}$ on Wednesday. What fraction has he read? What fraction is left?

G **Extra practice: three fractions.** Find the LCM of all three denominators. Simplify if you can.

1) $\frac{7}{12} + \frac{5}{18} - \frac{1}{4}$

2) $\frac{5}{8} + \frac{1}{6} - \frac{1}{3}$

3) $\frac{11}{20} + \frac{3}{8} - \frac{1}{4}$

4) $\frac{4}{5} + \frac{1}{10} - \frac{1}{6}$

CHALLENGE

$\frac{1}{4} + ? = \frac{5}{12}$. Find the missing fraction. Then make up your own "missing fraction" question for your partner.

Check yourselves

- ☐ I can find the LCM of two or three numbers.
- ☐ I can say which case a sum is: same, multiple or neither.
- ☐ I can add and subtract fractions, including three fractions, and simplify.
